**DETAILED ACTION**

**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Todd A. Sullivan on 05 January 2006.

2. Amend claim 1 as follows:
  1. An antenna [[feed assembly]] comprising:

a feed assembly,

wherein said feed assembly comprises:

a substrate;

a dipole on said substrate;

a reflector on said substrate; and

at least one bandpass filter element on said substrate, operationally between said dipole and said reflector.

***Allowable Subject Matter***

3. Claims 1-13 are allowed.

4. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to teach or suggest one or more of the limitations found in independent claims 1, 9, and 13. U.S. Patent Application Publication No. 2003/0142029 to Desargant et al., U.S. Patent Application Publication No. 2003/0128169 to Desargant et al., U.S. Patent No. 6,219,004 to Johnson, U.S. Patent No. 3,707,681 to Grant, and German Patent Document DE 41 40 866 A1 all teach prior art antenna feed systems. However, with respect to independent claim 1, the prior art of record fails to teach or suggest a feed assembly including the combination of a substrate; a dipole on the substrate; a reflector on the substrate; and at least one bandpass filter element on the substrate. With respect to independent claim 9, the prior art of record fails to teach or suggest the combination of a substantially planar substrate; a dipole and a reflector provided on the substrate; a first bandpass filter element provided on the substrate, operationally between the dipole and the reflector; and a second bandpass filter element provided on the substrate, operationally between the dipole and the reflector. With respect to independent claim 13, the prior art of record fails to teach or suggest the combination of a dipole on a substrate; a reflector; and a first bandpass filter element and a second bandpass filter element, wherein at least one of the bandpass filter elements comprises conductive traces fabricated on the substrate and wherein the first and second bandpass filter elements are elongated rectangles parallel to an edge of the dipole. Therefore, independent claims 1, 9, and 13, as well as all respective dependent claims, are allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Communication Information***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Leith A. Al-Nazer whose telephone number is 571-272-1938. The examiner can normally be reached on Monday-Friday, 7:30-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Don Wong can be reached on 571-272-1834. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
